Volume XX, THE SCIENCE TEACHER

Index—February through November, 1953

Author's Index

Armacost, Richard R. *Ask the Biologist.* September: 177.

Ashby, Lyle W. *Is the Greatest Thing in Science in Danger?* October: 221.

Bagshaw, Thomas L. *Unit Review With Slides.* November: 301.

Baker, Woolford B. *Conspiring to Inspire Through the Teaching of Science.* November: 273.

Barber, Robert M. *Lapidary as a Science Activity.* March: 64.

Berrong, Mary. *College Teachers: Please Listen!* October: 241.

Blanc, Sam S. *Science Instruction Over Commercial Television.* November: 287.

Bloom, Samuel W. *Educationally What Does Industry Need?* April: 114.

Bloom, Samuel W. (Coordinator) *Science Provisions for the Rapid Learner—A Symposium.* September: 161; October: 243; November: 291.

Blough, Glenn O. *Using Science Books in the Elementary School.* September: 165.

Boeck, Clarence H. *Try the Inductive Approach.* October: 236.

Boyer, Donald A. *Science Provisions for the Rapid Learner—A Symposium.* November: 291.

Brandwein, Paul F. *The Selection and Training of Future Scientists, IV: Developed Aptitude in Science and Mathematics.* April: 111.

Buck, Jacqueline V. and George G. Mallinson. *A Bill of Goods?* November: 299.

Cadbury, Joseph M. *Science Provisions for the Rapid Learner—A Symposium.* October: 243.

Chase, John B., Jr. *1953 Winners of Science Achievement Awards for Students.* September: 193.

Compton, Karl Benton. *Ten Thousand Year Old Classroom.* October: 228.

Crusan, Florence. *Convection Currents.* November: 302.

Curtis, Francis D. *Basic Principles of Science Teaching.* March: 55.

Decker, Donald G. *Planning Elementary Science Programs.* November: 277.

Denaburg, Jerome G. *Science Provisions for the Rapid Learner—A Symposium.* October: 245.

Derrick, J. O. *Metals in World Affairs.* November: 280.

Drapkin, Herbert. *An Antibiotic Display.* September: 179.

Edgemon, Albert W. *The Student in NSTA.* November: 284.

Efron, Alexander. *Science Provisions for the Rapid Learner—A Symposium.* September: 183.

Einzig, Mildred. *Atomic Energy in the Sixth Grade.* February: 15.

Eiseman, Frederick B., Jr. *Laboratory Manuals and Workbooks in High School Science.* April: 116.

Goins, William F., Jr. *Science Textbook Needs in High Schools.* March: 70.

Hale, Helen E. *Winners in 1953 Program of Recognition Awards for Science Teachers.* September: 202.

Hanson, Raus M. *Frankly Facing Temperatures.* October: 230.

Harville, John and Martinus Van Waynen. *Demonstrations with Power Company Meters.* September: 164.

Healy, Daniel and William Niehaus; Charles Robison. *Science Provisions for the Rapid Learner—A Symposium.* October: 244.

Hendricks, B. Clifford. *Laboratory Evidence.* September: 170.

Hough, Arleigh. *Problems of Publishing School Science Books.* April: 118.

Hubler, Clark. *As the Twig Is Bent.* October: 247.

Jacobson, Willard. *Teaching New Developments in Science: Recent Advances in Agriculture.* April: 130.

Johnson, W. Maclean. *The Financial Side of Textbook Publishing.* April: 119.

Jordon, Arthur E. *Science Textbook Needs in the Elementary Schools.* March: 70.

Kaeiser, Margaret. *Rapid Technic for Permanent Slides of Wood Sections.* October: 247.

King, Jennings J. *A Simple Fuse Demonstration.* October: 247.

Klinge, Paul. *Implementing the Basic Principles of Science Teaching With Superior Students in the Senior High School.* March: 61.

Klinge, Paul. *Science Provisions for the Rapid Learner. —A Symposium.* November: 293.

Kovelman, Gilbert. *Electronic Purity Test for Metals.* February: 27.

Krasnican, Milan J. *Getting Acquainted with Your Students.* September: 180.

Lawson, Chester A. *General Education in the Natural Sciences.* March: 66.

Leacy, C. Richard and Robert D. MacCurdy. *Turn About's Fair Play!* April: 127.

Lisonbee, Lorenzo. *Biology—Why Not Make It Interesting?* February: 12.

MacCurdy, Robert D. and C. Richard Leacy. *Turn About's Fair Play!* April: 127.

Mallinson, George G. and Jacqueline V. Buck. *A Bill of Goods?* November: 299.

Maul, Ray C. *Wanted: Science Teachers for Tomorrow.* September: 173.

MacCurdy, Robert D. and C. Richard Leacy. *Turn About's Fair Play!* April: 127.

Mallinson, George G. and Jacqueline V. Buck. *A Bill of Goods?* November: 299.

Maul, Ray C. *Wanted: Science Teachers for Tomorrow.* September: 173.

McCollum, Clifford G. *The Determination of Science Maturity as a Means of Improving the Program in Elementary Science.* October: 238.
McCroskey, Donald. *The Bacchus Experiment with Air Pressure.* February: 33.
Meister, Morris. *The Ford Foundation Experiments—Their Implications for the Science Education of High-Ability Youth.* April: 107.
Mendenhall, William W. *The Bible and Science.* March: 69.
Michel, Elsie. *Elementary Science Field Trips.* April: 137.
Niehaus, William and Charles Robison; Daniel Healy. *Science Provisions for the Rapid Learner—A Symposium.* October: 244.
Postl, Anton. *A Half-Century of Nobel Prizes in Science.* February: 18.
Richardson, Evan C. *Tanks and Gadgets from Glass Bottles.* September: 179.
Robison, Charles and William Niehaus; Daniel Healy. *Science Provisions for the Rapid Learner—A Symposium.* October: 244.
Ruchlis, Hyman. *New Approaches Needed in Physics.* February: 14.
Schenberg, Samuel. *High School Science in the Post-War Years.* February: 9.
Shalucha, Barbara. *Elementary Schools and Colleges Cooperate to Provide . . . Garden Magic for Thousands More.* April: 135.
Skoepol, Charles L. *Fuse Those Meters.* September: 180.
Smith, Charles C. *Science Fiction—Asset or Liability?* October: 233.
Stopak, Evelyn. *Pre-Kindergarten Children Learn About Machines.* March: 62.
Strahler, Violet. *Implementing the Basic Principles of Science Teaching With Superior and Retarded Students in General Science.* March: 60.
Strauchler, Jean. *Science Provisions for the Rapid Learner—A Symposium.* November: 295.
Stüler, Alexander. *Experiences With Light.* Feb.: 29.
Swan, Bryan F. *Science Provisions for the Rapid Learner—A Symposium.* September: 182.
Thames, Martin. *Implementing the Basic Principles of Science Teaching in High School Physics.* March: 61.
Van Deventer, W. C. *Science Textbook Needs for the College Level.* March: 71.
Van Waynen, Martinus and John Harville. *Demonstrations with Power Company Meters.* September: 164.
Vogel, Louis F. *Materials for a Contemporary Science Problem: Fluoridation of Public Water Supplies.* October: 225.
Walters, John. *Hydraulic Demonstrations of EMF, Terminal Voltage, and Types of Circuits.* February: 31.
Wareham, Richard T. *The Preparation of School Science Textbook Manuscripts.* April: 119.
Watson, Fletcher G. *Astronomical Phenomena 1953.* February: 33.
Weaver, Elbert C. *Projects for Science Fairs.* February: 17.
Wilson, James R. *Story of a Geyser Model.* November: 285.
Wise, Harold E. *NSTA Supports the NEA Centennial Action Program.* February: 24.
Wolfle, Dael. *Future Supply of Science and Mathematics Students.* September: 157.
Woodburn, John H. *Visual Aids and the Problem-Solving Type of Teaching Exercise.* September: 167.

Topical Index

History, Philosophy, Goals, and Objectives

Basic Principles of Science Teaching. Francis D. Curtis. March: 55.
Conspiring to Inspire Through the Teaching of Science. Woolford B. Baker. November: 273.
General Education in the Natural Sciences. Chester A. Lawson. March: 66.
Is the Greatest Thing in Science in Danger? Lyle W. Ashby. October: 221.
Laboratory Evidence. B. Clifford Hendricks. September: 170.
The Bible and Science. William W. Mendenhall. March: 69.

Instructional Suggestions, Methods, and Materials

As the Twig Is Bent. Clark Hubler. October: 247.
Ask the Biologist. Richard R. Armacost. Sept.: 177.
Atomic Energy in the Sixth Grade. Mildred Einzig. February: 15.
Biology—Why Not Make It Interesting? Lorenzo Lisonbee. February: 12.
Elementary Schools and Colleges Cooperate to Provide . . . Garden Magic for Thousands More. Barbara Shalucha. April: 135.
Elementary Science Field Trips. Elsie Michel. April: 137.
Frankly Facing Temperatures. Raus M. Hanson. October: 230.
Fuse Those Meters. Charles L. Skoepol. September: 180.
Getting Acquainted With Your Students. Milan J. Krasnican. September: 180.
Implementing the Basic Principles of Science Teaching With Superior and Retarded Students in General Science. Violet Strahler. March: 60.
Implementing the Basic Principles of Science Teaching in High School Physics. Martin Thames. March: 61.
Implementing the Basic Principles of Science Teaching With Superior Students in the Senior High School. Paul Klinge. March: 61.
Laboratory Manuals and Workbooks in High School Science. Frederick B. Eiseman, Jr. April: 116.

Lapidary as a Science Activity. Robert M. Barber. March: 64.
Materials for a Contemporary Science Problem: Fluoridation of Public Water Supplies. Louis F. Vogel. October: 225.
New Approaches Needed in Physics. Hyman Ruchlis. February: 14.
Pre-Kindergarten Children Learn About Machines. Evelyn Stopak. March: 62.
Science Fiction—Asset or Liability? Charles C. Smith. October: 233.
Science Instruction Over Commercial Television. Sam S. Blanc. November: 287.
Science Provisions for the Rapid Learner—A Symposium. Samuel W. Bloom (Coordinator). September: 161; October: 243; November: 291.
Science Textbook Needs in High Schools. William F. Goins, Jr. March: 70.
Ten Thousand Year Old Classroom. Karl Benton Compton. October: 228.
Try the Inductive Approach. Clarence H. Boeck. October: 236.
Turn About's Fair Play! Robert D. MacCurdy and C. Richard Leacy. April: 127.
Using Science Books in the Elementary School. Glenn O. Blough. September: 165.
Visual Aids and the Problem-Solving Type of Teaching Exercise. John H. Woodburn. September: 167.

Information for Science Teachers

A Half-Century of Nobel Prizes in Science. Anton Postl. February: 18.
Astronomical Phenomena 1953. Fletcher G. Watson. February: 33.
Educationally What Does Industry Need? Samuel W. Bloom. April: 114.
Future Supply of Science and Mathematics Students. Dael Wolfle. September: 157.
Hanor A. Webb Retires. September: 206.
Indianapolis Telecasts Science Achievement Awards Program. April: 125.
Metals in World Affairs. J. O. Derrick. Nov.: 280.
NSTA Supports the NEA Centennial Action Program. Harold E. Wise. February: 24.
Problems of Publishing School Science Books. Arleigh Hough. April: 118.
Requirements for Chemistry Merit Badge. September: 205.
Science Instruction Over Commercial Television. Sam S. Blanc. November: 287.
Science Textbook Needs for the College Level. W. C. Van Deventer. March: 71.
Science Textbook Needs in the Elementary Schools. Arthur E. Jordan. March: 70.
The Financial Side of Textbook Publishing. W. Maclean Johnson. April: 119.
The Preparation of School Science Textbook Manuscripts. Richard T. Wareham. April: 119.
The Student in NSTA. Albert W. Edgemon. November: 284.
Winners in 1953 Program of Recognition Awards for Science Teachers. Helen E. Hale. September: 202.
1953 Winners of Science Achievement Awards for Students. John B. Chase, Jr. September: 193.

Science Clubs, Fairs, Exhibits; Science Talent Searches

Projects for Science Fairs. Elbert C. Weaver. February: 17.

Investigations, Research, and Fact-finding Studies

Future Supply of Science and Mathematics Students. Dael Wolfle. September: 157.
High School Science in the Post-War Years. Samuel Schenberg. February: 9.
The Determination of Science Maturity as a Means of Improving the Program in Elementary Science. Clifford G. McCollum. October: 238.
The Ford Foundation Experiments—Their Implications for the Science Education of High-Ability Youth. Morris Meister. April: 107.
The Selection and Training of Future Scientists, IV: Developed Aptitude in Science and Mathematics. Paul F. Brandwein. April: 111.
Wanted: Science Teachers for Tomorrow. Ray C. Maul. September: 173.

Experiments, Demonstrations and Pupil Projects and Activities

An Antibiotic Display. Herbert Drapkin. September: 179.
A Simple Fuse Demonstration. Jennings J. King. October: 247.
Convection Currents. Florence Crusan. November: 302.
Demonstrations with Power Company Meters. Martinus Van Waynen and John Harville. September: 164.
Electronic Purity Test for Metals. Gilbert Kovelman. February: 27.
Experiences With Light. Alexander Stüler. February: 29.
Frankly Facing Temperatures. Raus M. Hanson. October: 230.
Fuse Those Meters. Charles L. Skoepol. September: 180.
Hydraulic Demonstrations of EMF, Terminal Voltage, and Types of Circuits. John Walters. February: 31.
Lapidary as a Science Activity. Robert M. Barber. March: 64.
Rapid Technic for Permanent Slides of Wood Sections. Margaret Kaeiser. October: 247.
Story of a Geyser Model. James R. Wilson. November: 285.
Tanks and Gadgets from Glass Bottles. Evan C. Richardson. September: 179.
The Bacchus Experiment with Air Pressure. Donald McCroskey. February: 33.
Turn About's Fair Play! Robert D. MacCurdy and C. Richard Leacy. April: 127.

Education of Science Teachers

College Teachers: Please Listen! Mary Berrong. October: 241.

The Student in NSTA. Albert W. Edgemon. November: 284.

Wanted: Science Teachers for Tomorrow. Ray C. Maul. September: 173.

Conservation and Gardening

Elementary Schools and Colleges Cooperate to Provide . . . Garden Magic for Thousands More. Barbara Shalucha. April: 135.

Metals in World Affairs. J. O. Derrick. Nov.: 280.

Elementary School Science

A Bill of Goods? George G. Mallinson and Jacqueline V. Buck. November: 299.

As the Twig Is Bent. Clark Hubler. October: 247.

Atomic Energy in the Sixth Grade. Mildred Einzig. February: 15.

College Teachers: Please Listen! Mary Berrong. October: 241.

Convection Currents. Florence Crusan. Nov.: 302.

Elementary Schools and Colleges Cooperate to Provide . . . Garden Magic for Thousands More. Barbara Shalucha. April: 135.

Elementary Science Field Trips. Elsie Michel. April: 137.

Planning Elementary Science Programs. Donald G. Decker. November: 277.

Pre-Kindergarten Children Learn About Machines. Evelyn Stopak. March: 62.

Science Textbook Needs in the Elementary Schools. Arthur E. Jordan. March: 70.

Tanks and Gadgets from Glass Bottles. Evan C. Richardson. September: 179.

The Determination of Science Maturity as a Means of Improving the Program in Elementary Science. Clifford G. McCollum. October: 238.

Using Science Books in the Elementary School. Glenn O. Blough. September: 165.

Selection and Organization of Course Content

General Education in the Natural Sciences. Chester A. Lawson. March: 66.

Materials for a Contemporary Science Problem: Fluoridation of Public Water Supplies. Louis F. Vogel. October: 225.

Planning Elementary Science Programs. Donald G. Decker. November: 277.

Teaching New Developments in Science: Recent Advances in Agriculture. Willard Jacobson. April: 130.

Tests and Evaluation of Outcomes

Unit Review with Slides. Thomas L. Bagshaw. Nov.: 301.

Visual Aids and the Problem-Solving Type of Teaching Exercise. John H. Woodburn. September: 167.

FSA Activities

Chart Making Contest for Science Students. October: 256. November: 305.

RECONDITIONED MICROSCOPES

Rocky Mountain Regional Conference. September: 185.

These coupons announce the availability of free and low-cost teaching aids for science. Business-sponsored items have been reviewed by the NSTA Evaluation Committee and approved for distribution by the Association. To procure copies of desired items, fill out and clip the corresponding coupons and mail these, together with any remittance required, to the NSTA Executive Secretary, 1201 Sixteenth Street, N.W., Washington 6. Watch these columns for additional offerings in future issues of *The Science Teacher.* (Print or type coupons.)

THE A-B-C's OF ALUMINUM. *Reynolds Metals Company.* In simple non-technical language, this booklet tells the story of who discovered aluminum, what it is and what its properties are like, how it is made into useful products, etc. 32 pp.; free.

Please send me ..... free copies of **The A-B-C's of Aluminum.**

CELLULOSE—THE CHEMICAL THAT GROWS. *Doubleday & Company, Inc.*

This first book of the American Industry Series presents the story of one of the world's most important renewable resources. The author, William Haynes, makes scientific facts appear to be fiction. Now being distributed to NSTA life and sustaining members; available to other members while the limited supply lasts. *Recipients of the book will be expected to make a postal card report of their experiences with the use of the book in their science classes.*

Please send me a copy of **Cellulose—The Chemical That Grows.**

YOU HAVE A *Choice* IN

AO Teaching Microscopes

No. 66
Recommended where electrical outlets are NOT available.

Convenient styling and standard design make up the No. 66 Student Microscope. All the performance features of more advanced microscopes are built into the No. 66 including:

A fine adjustment with full 9-turn excursion.

Durable all metal parts.

Quality optics with a wide range of magnifications.

Controls above stage, close to slide.

Inclination joint for tilting to a comfortable angle.

Substage mirror for utilization of any light source.

While initial cost is slightly higher than lowest cost microscopes, over a period of years the sturdy long-wearing No. 66 will actually save you money through low maintenance costs. Invest in the future with a No. 66. Write for detailed information.

No. 78
Recommended where electrical outlets are available.

Modern in appearance and mechanically streamlined for efficient student operation, the No. 78 Scholar's Microscope is unprecedented for effective teaching. It has:

Simplified adjustments to reduce instruction time.

Low over-all height for comfortable posture.

Reversed arm for clear view of stage, slides, objectives.

Prefocused, built-in illuminator.

Locked-in optics to prevent loss or damage.

Safety stop to eliminate slide breakage.

Quality optics for sharp clear images.

These are just a few of the No. 78's features that have revolutionized science teaching. For more complete information return the coupon below.
